Continuation of 2. NOTE: First, adding of the language "color" in association with "silver halide photographic material" change the scope of the claims that require further consideration and/or search; second, claims 12-20 are related to the claiming of a "silver halide photographic emulsion" raises the issue under 35 USC 112, second pargraph beause of lacking antecedent basis thereof.

Continuation of 5. does NOT place the application in condition for allowance because: The Declaration under 37 CFR 1.132 filed May 29, 2002 is irrelevant to the silver halide color photothermographic material exemplified in Miyamoto et al, especially the material in Example 2, columns 36-39. The materials disclosed in the Declaration is made according to Sample No 201 of the present specification wherein different combination of dyes has been compared. However, the invention is related to a silver halide color photographic material encompasses the scope taught in Miyamoto wherein the good results are obtained by the use of the selenium compound and the spectral sensitizing dye. The photographic properties of the silver halide photographic material are not based solely on the spectrally sensitize alone, but with other addenta such as silver halide grain, chemical sensitizer, antifoggant etc... Therefore, in the absence of using the material of the prior art as a base to compare the combination of the dyes claimed in the present invention, it is the Examiner's position that the claimed invention is still prima facie obvious over the applied prior art of record.
